

# Process Diagram

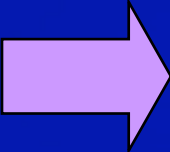

User/Owner

User discovers that his or her aircraft is missing and calls the Security Service Provider.

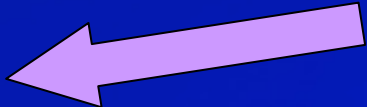

Security Service Provider  
(or Internal Help Desk)

Authenticates user and contacts satellite/paging service

Satellite/paging Company

Satellite or terrestrial signal with identification code and command is broadcast.

If possible, the aircraft can obtain a position fix via GPS and communicate this information back to the Security Service provider.

The aircraft receiving the message validates the signal and performs the operation specified in the message (e.g. lockdown).
